

ZIVOFIT FINANCIAL FORECAST & MATH MODEL

On-Device AI Engine & Cloud Synchronization Cost Analysis

1. Core Assumptions & Parameters

This document details the financial math model for the ZivoFit mobile application. Calculations are computed assuming an exchange rate of **1 USD = 83.5 INR**. Calculations assume an active user profile executing **15 scans/day** (mix of barcode searches, plate scans, OCR fallbacks) and **20 database syncs/day**.

2. AI & Cloud Sync Daily Cost Breakdown

Scan/Operation Type	API / Backend Used	Cost per Occurrence (INR)
Meal Plate Scanner (Visual)	Gemini 1.5 Flash	0.009 INR
Standard Barcode Scanner	OpenFoodFacts API	0.000 INR (Free)
Product Text Structured Fallback	Local OCR + Gemini	0.010 INR
Visual Product Label Identification	Gemini Vision	0.021 INR
Deep Ingredient Analysis (Vision Lens)	Gemini 1.5 Flash	0.032 INR
Cloud Syncing (20 syncs/day)	Firebase Firestore	0.004 INR

Total Cumulative Operating Cost per User: 0.143 INR/day | 4.29 INR/month | 52.20 INR/year

3. Payout Deductions Flow (Taxes & Platform Commission)

Apple and Google Play in-app purchases in India are subject to **18% GST** (automatically collected) and **1% TDS** under Section 194O. The breakdown below details the remaining payout:
